HorizonX

Fuelling Growth Through Strategic Innovation

Business Consulting and Services · London · 6K followers · 2-10 employees

Overview

HorizonX is a strategy consultancy that helps large enterprises convert emerging technology into commercial advantage. The firm works at the intersection of quantum technologies, artificial intelligence, and corporate innovation – the three areas where the gap between technical possibility and executive decision-making is widest, and where the cost of moving late is highest. Underpinning all three is a fourth discipline: corporate training, delivered through our collaboration with MIT xPRO, which builds the internal capability that makes any of it executable.

Our proposition is simple: emerging technology is now a board-level capital allocation question, not an R&D curiosity. Quantum computing will reshape optimization, simulation, and materials discovery in specific industries before it reshapes them all. Cryptographically relevant quantum computing will force the largest cryptographic migration in enterprise history, on a timeline set by regulators rather than by CIOs. AI is already redistributing margin across sectors. Each of these demands a defensible position, a sequenced roadmap, and an organization capable of executing it.

That last requirement is the one most firms underestimate. Strategy fails at the point where the workforce cannot absorb it – which is why our MIT xPRO collaboration is not an adjacent business line but a structural part of how we deliver. Twenty-eight co-developed courses spanning innovation, AI, quantum technologies, engineering, and leadership give clients a route from board-level intent to organizational fluency, combining MIT's academic rigor with what we learn on live enterprise engagements.

BIOGRAPHY

Steve Suarez is the Founder and CEO of HorizonX, a consulting firm focused on business strategy and the adoption of emerging technologies. He is Senior Advisor on Emerging Technology to McKinsey & Company, sits on the Board of Advisors at Classiq, a leading quantum software provider, and advises QuSecure and Zapata Quantum. He previously held senior advisory roles at Bain & Company, the UK Board of QuEra Computing (a pioneer in neutral-atom quantum computing), and Mitsubishi Corporation, London Branch. He is also co-founder of The Quantum Index, a global benchmarking initiative that ranks enterprise quantum readiness.

Before founding HorizonX, Steve was Global Head of Innovation, Global Functions at HSBC, where he led large-scale initiatives to drive digital transformation and future-proof the organization. Across more than three decades in consulting, telecommunications, and financial services, he has built a reputation for championing bold, forward-looking strategies, leading complex change programs, and building high-performing global teams. He speaks regularly at leading technology conferences.

At the Massachusetts Institute of Technology, Steve is a guest lecturer for the "Quantum Computing: Strategy and Impact" course, teaching frameworks for quantum readiness and strategic adoption that help organizations shape their quantum strategies.

Steve holds an MBA and is an alumnus of both Harvard Business School and MIT Sloan School of Management.
